Cell culture: Transfection of HEK293T (24-well plate, according to Mannilian cell transfection with Lipofectamine 3000)

A: 12h  
B: 24h  
C: 48h  
D: 72h

Cell culture: HEK293T seeding (24-well plate, 150,000 cells/well, 800 ul full DMEM/well)

Cell culture: Medium transfer 12h Origins --> Recipients

Cell culture: Cell washing*: take off 700ul old medium, wash with 700ul DPBS, gently shake, take-off, repeat once, add 700ul fresh full DMEM

*perform separately, not for multiple wells at once and put the plate in the incubator in between to prevent cells from being stressed too much

Sarah

His-purification

Transfected:
- 3ng of His-AM, 2ng of MeM
- 3ng of AM, 2ng of MeM
- $V_L = 3$ ml

Gravity flow instead of centrifugation (HisPur NiNTA resin beads)

- equilibrate beads with PBS
- incubate 1h at 4°C
- wash with freshly prepared buffer: 3CV (25mM imidazole, PBS pH=7.4, approx. 4.5ml)
- elute with freshly prepared buffer 2CV (250mM imidazole, PBS pH=7.4, approx. 3ml)
- perform HiBiT Assay (according to VLPs / Exosomes harvesting & HiBiT assay from 96-well plates: step 9)
