06. (June) 2019

**Project:** iGEM_Munich2019 Shared Project  
**Authors:** Johanna Wallner

**WEDNESDAY, 12/6/2019**

**Sequencing result**
- V8#6&11 are positive clones
- V8#7 contains a point mutation

**Contamination problem in cell culture**
Bacteria (black dots) and maybe yeast (big round cells(?)) were observed in the mother plate and the seeded 96-well plate. They were both discarded. We will get new cells from Susanne.
